                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 and comprising a sequence (S2); (2) a diagnostic method based on antisera cangainst prRP20 for identification of disorders involving the central conservous system, including those associated with pain or autonomic regulation, where specific antisera against the N-and/or C-terminal conservous system, including those associated with pain or autonomic regulation, where specific antisera against the N-and/or C-terminal conservous system by a interations in prRP synthesis or levels; (3) a rat or human receptor encoded by a 1122 nucleotide sequence (C3), fully defined in the specification; (4) treating a person suffering from a disorder regulated by a receptor (II) encoded by a sequence of 1122 nucleotide sequence, fully defined in the specification, located in the receptor; and (5) treating blood pressure, by blocking of receptors of the receptor; and (5) treating blood pressure, by blocking of receptors of PrRP or its C-terminal fragment GlyllaxgprovalGlyArgPhe-NH-2 (S2). The products of the invention have analgesic and hypotensive activity. (I) is useful for regulating autonomic functions, such as increasing comedicament for regulating blood pressure, and for treating pain. Agonist and antegonist of (II) are useful for treating acute pain, inflammatory can an analysis of the products of the second pressure, and for treating pain, inflammatory can an administration pain, for regulating autonomic functions and creating high blood pressure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC GPRIO (human) or UHR-1 (rat). Cells transformed with a vector containing Ct the ligand polypeptide encoding DNA are used to produce a recombinant CC ligand polypeptide encoding DNA are used to produce a recombinant CC ligand polypeptide, and its fragments, modulate CC function of the pituitary, central nervous system, pancreas and other CC tissues and can be used to screen for agents that modulate binding of CC encoupled to the receptor; to quantify the amount of receptor in a CC sample and to raise antibodies. They may also be used therapeutically, CC e.g. to treat senile dementia; Alzhelmer's, Parkinson's or Huntington's CC diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC diseases; Schizophrenia; disorders of growth hormone secretion; cancer; CC remanatoid arthritis, epilepsy and many others, also to improve post-coperative nutritional status and as vasopressor. Transgenic animals CC carrying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide expressing genes, as models of CC study the function of the polypeptide expressing genes, as models of CC study the function of the polypeptide expressing sense; for identify CC related sequences; in receptor-binding assays; for production of Ab and CC related sequences; in receptor-binding assays; for production of Ab and CC antisers; in drug development; for gene therapy and to develop encore continues which can be used for the preparation of anti-ligand polypeptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  as a pituitary function modulator, a central nervous system modulator or a pancreatic function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, hyper- and polyphagia, hyperipidaemia, hypercholesterolaemia, hyperilidaemia, hypercholesterolaemia, hyperilidaemia, hypercholesterolaemia, renal disease, Turner's syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardial infarction, infertility, spinocerebellar degeneration, bone fracture, trauma, atopic dermatitis, osteoporosis and/or oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting activation of the G protein-coupled receptor protein.
                                                                                                                                                              pituitary adenomatosis; brain tumour; emmeniopathy; autoimmune disease; prolactinoma; infertility; impotence; amenorrhea; galactorrhea; prolactinoma; Chiari-Frommel syndrome; Argonz-del Castilio syndrome; Forbes-Albright syndrome; lymphoma; Sheehan syndrome; dyszoospermia; contraceptive; placental function; choriocarcinoma; hydatid mole; irruption mole; abortion; unthrifty fetus; abnormal saccharometabolism;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This peptide contains the partial C-terminal sequence of the synthetic ligand polypeptide 1992-L31 which is capable of binding to a G protein-coupled receptor protein. This peptide is used as an antigen to prepare rabbit anti-bovine 1992-L31 antibodies which are used in binding assays. Pharmaceutical compositions containing this ligand may be used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC AAW97229-31 represent a ligand polypeptide derived fragments used to CC produce antibodies. The specification describes an agent for modulating CC prolactin secretion which comprises a ligand polypeptide or a salt, for CC as protein-coupled receptor (GPCR) protein. The agents for promoting CC hypometabolism. They can be used for treating or preventing hypovarianism, gonecyst cacogenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting lactation in a domestic CC mammal and as an aphrodisiac. The agents for inhibiting prolactin CC secretion can be used for treating or preventing pituitary adenomatosis, CC infertility, impotence, amenorrhea, yalactorrhea, acromegaly, CC chari-Frommel syndrome, Argonz-del Castilo syndrome, Forbes-Albright CC syndrome, Iymphoma, Sheehan syndrome or dyszoospermia. The inhibitory CC agents can also be used as contraceptives. The agents for modulating CC choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19p2 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative sequences AAY49290-302 represent peptide fragments of the 19p2 ligand.

CC ligand polypeptide corresponding to amino acid residues 34 to 53 of the Cs sequence represented in Anwall390 and is used in an assay to monitor CC ligand binding to the G protein-coupled receptor protein. Pharmaceutical CC compositions containing this ligand may be used as a pituitary function CC modulator. This ligand could have specific applications as a CC prophylactic or therapeutic agent for dementia, depression, hyperkinetic CC syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, CC trauma, growth hormone secretory disease, hyper- and polyphagia, CC hyperlipidaemia, hypercholesterolaemia, hyperglyceridaemia, proventh hormone secretory disease, hyper- and polyphagia, CC Turner's syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, CC transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardial infarction, infertility, spinocerabeliar degeneration, CC conselve of altering the binding activity of the ligand affecting CC capable of altering the binding activity of the ligand affecting CC activation of the G protein-coupled receptor protein.

                                     hyperlipidaemia, hypercholesterolaemia, hyperglyceridaemia, hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, Turner's syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardial infarction, infertility, spinocerebellar degeneration, bone fracture, trauma, atopic dermatitis, osteoporosis and/or oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                   This sequence represents a peptide fragment from a novel rat type ligand polypeptide corresponding to amino acid residues 33 to 52 of the sequence represented in AAW31383 and is used in an assay to monitor ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator, a central nervous system modulator or a pancreatic function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, hyper- and polyphagia, hyper-incidents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              18-SEP-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Š
                                                                                      The present sequence represents a bovine pituitary-derived ligand if fragment. It is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypowratianism, gonecyst cacogenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting clactation in a domestic mammal and as an aphrodisiac. The agents for inhibiting prolactin secretion can be used for treating or preventing pituitary adenomatosis, brain tumour, emmenlopathy, autolimnue disease, prolactinoma, infertility, impotence, amenorrhea, galactorrhea, carcomegaly, Chiari-Frommel syndrome, amenorrhea galactorrhea, The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing the choriton, hydrid indiction made abortion and proventing or preventing that it made in the protection made abortion or preventing that it made in the protection in the

The present sequence represents a rat type ligand fragment. It

is used in the course of the invention. The specification describes

an agent for modulating prolactin secretion which comprises a

CC ligand polypeptide or a salt, for a G protein coupled receptor (GPCR)

CC protein. The agents for promoting prolactin secretion can be used for

CC treating or preventing hypocovarianism, genecyst cacogenesis, menopausal

CC syndrome, euthyroid or hypometabolism. They can by used for promoting

CC lactation in a domestic mammal and as an aphrodisiac. The agents for

CC inhibiting prolactin secretion can be used for treating or preventing

CC pituitary adenomatosis, brain tumour, emmeniopathy, autoimmune disease,

CC prolactinoma, infertility, impotence, amenorrhea, galactorrhea,

CC consequity, Chiari-Frommel syndrome, Argonz-del Castilo syndrome,

CC prolactinoma, hydarid mole, irruption mole, abortion, unthrifty fetus,

CC choriocarcinoma, hydarid mole, irruption mole, abortion, unthrifty fetus,

                            The present sequence represents a human type ligand fragment. It is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a g protein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypowerainaism, gonecyst cacogenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting syndrome, euthyroid or hypometabolism and as an aphrodisiac. The agents for inhibiting prolactin secretion can be used for treating or preventing pluuitary adenomatosis, brain tumour, emmeniopathy, autoimmune disease, prolactinoma, infertility, impotence, amenorrhea, galactorrhea, caromegaly, Chiari-Frommel syndrome, Argonz-del Castillo syndrome, Forbes-Albright syndrome, lymphoma, Sheehan syndrome or dyszoospermia. The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus, abortion, unthrifty fetus,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       G protein-coupled receptor; GPCR; hypoovarianism; gonecyst cacogenesis; menopausal syndrome; euthyroid; hypometabolism; lactation; pituitary adenomatosis; brain tumour; emmeniopathy; autoimmune disease; prolactinoma; infertility; impotence; amenorrhea; galactorrhea; acromegaly; Chiari-Frommel syndrome; Argonz-del Castilo syndrome; acromegaly; Chiari-Frommel syndrome; Argonz-del Castilo syndrome; Forbes-Albright syndrome; lymphoma; Sheehan syndrome; dyszoospermia; contraceptive; placental function; choriocarcinoma; hydatid mole; abortion; unthiffy fetus; abnormal saccharometabolism; abnormal saccharometabolism;

CG GPRIO (human) or UHR-1 (rat). Cells transformed with a vector containing the ligand polypeptide encoding DNA are used to produce a recombinant CC ligand polypeptide. The ligand polypeptide, and its fragments, modulate CC function of the pituitary, central nervous system, pancreas and other ctissues and can be used to screen for agents that modulate binding of the CC gample and to raise antibodies. They may also be used therapeutically, CC e.g. to treat senile dementia; Alzheimer's, Parkinson's or Huntington's CC diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC diseases; creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC reumatoid arthritis, epilepsy and many others, also to improve post-corrective nutritional status and as vasopressor. Transgenic animals CC carrying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide-expressing genes, as models of collegase, for drug screening and as source of cell lines. The ligand CC animals. The present sequence represents a bovine genome-derived ligand CC animals. The present sequence represents a bovine genome-derived ligand collepetide fragment which is similar to the murine ligand-polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            tlasue; screen; therapeutic; binding; senile dementia; ligand; murine; Alzheimer's disease; Parkinson's disease; Huntington's disease; goisoning; schizophrenia; growth hormone; secretion; disbetes; cancer; rheumatoid arthritis; epilepsy; vasopressor; gene therapy; transgenic animal; bovine.
                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a murine pituitary-derived ligand polypeptide which is a ligand for the G-protein coupled orphan receptor designated GPR10 (human) or UHR-1 (rat). Cells transformed with a vector containi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAW95191 standard; peptide; 20

AAW95175
The invention relates to a murine pituitary-derived ligand polypeptide CC which is a ligand for the G-protein coupled orphan receptor designated CC GPRIO (human) or UHR-1 (rat). Cells transformed with a vector containing CC the ligand polypeptide encoding DNA are used to produce a recombinant CC ligand polypeptide. The ligand polypeptide, and its fragments, modulate CC function of the pituitary, central nervous system, pancreas and other CC tissues and can be used to screen for agents that modulate binding of CC the polypeptide to the receptor; to quantify the amount of receptor in a CC sample and to raise antibodies. They may also be used therapeutically, CC e.g. to treat senile dementia; Alzheimer's, parkinson's or funtington's CC diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC carrying the ligand gloypeptide encoding DNA or its mutein animals CC carrying the ligand polypeptide encoding DNA or its mutein are used to consult the function of the polypeptide-expressing genes, as models of CC study the function of the polypeptide-expressing genes, as models of constant sease, for drug screening and as source of cell lines. The ligand CC related sequences; in receptor-binding assays; for production of Ab and CC carrying the ligand constant sease as source of cell lines. The ligand CC creation of the constant of the proper therapy and to development; for gene therapy and to develop constant in the protess of the proper therapy and polypeptide constants. Sequences AAW95174 to AAW95178 represent antigenic ceptor-binding assays; for production of Ab and constants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Best Local Similarity

Database

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Title: Perfect score: Sequence: US-09-446-543A-73\_COPY\_13\_21 44 1 GIRPVGREX 9

Scoring table:

BLOSUM62 Gapop 10.0 , Gapext 0.5

Searched: 105224 seqs, 38719550 residues

Total number of hits satisfying chosen parameters: 105224

Minimum DB seq length: 0
Maximum DB seq length: 200000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

Database : SwissProt\_40:\*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-I- FUNCTION: DNA GYRASE NEGATIVELY SUPERCOILS CLOSED CIRCULAR DOUBLE-STRANDED DNA IN AN ATP-DEPENDENT MANNER AND ALSO CATALYZES THE INTERCONVERSION OF OTHER TOPOLOGICAL ISOMERS OF DOUBLE-STRANDED DNA RINGS, INCLUDING CATENANES AND KNOTTED RINGS.
-I- CATALYTIC ACTIVITY: ATP-dependent breakage, passage and rejoining of double-stranded DNA.
                                                                                                                                                                                                                               SEQUENCE OF 33-179 FROM N.A. FUNCTION: CAN METABOLIZE THE AFLATOXIN B1 (AFB1) PROTEIN-BINDING
DIHYDRODIOL BY FORMING NONBINDING AFB1 DIALCOHOL. COULD BE
INVOLVED IN PROTECTION OF LIVER AGAINST THE TOXIC AND CARCINOGENIC
EFFECTS OF AFLATOXIN B1.
SUBCELLULAR LOCATION: Cytoplasmic.
SIMILARITY: BELONGS TO THE ALDO/KETO REDUCTASE 2 FAMILY.
